100 Series Step Down Ceiling Diffuser

- Step-down core design
- Four-way air diffusion
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Step down feature allows for uniform airflow distribution
- Variations:
 - 100 – diffuser less damper
 - 100 D – diffuser with steel multi-shutter damper
 - 100 O – diffuser with steel lever operated opposed blade damper

• Soft White

Optional:

- Square to round no labor collar (see page 24)
- Finishes B & C (see page 21)

Size	Dimension "A"
6	1 1/4
8	1 1/4
10	1 1/2
12	2
14	2 3/4
16	2 3/4
18	3
20	3
24	3 1/4

For Engineering information see page E4.

150 Series 4-Way Ceiling Diffuser

- Louvered with stiffened 1/2" blade for silent operation
- Standard multi-shutter damper
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Countersunk mounting holes for flush appearance, with color matching Phillips posi-drive screws

• Soft White

Optional:

- Steel Lever operated Opposed blade damper (150 O)
- Finishes B, C & D (see page 21)
- Square to round no labor collar (see page 24)
- Series 151 - Grille only

For Engineering information see page E8.

SDD Series

Square Ceiling Directional Diffuser

- Fixed steel cores
- Steel frame
- Five different air patterns
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Variations:
 - SDD** - Diffuser less damper
 - SDD-D** - Diffuser with steel Multi-shutter damper
 - SDD-O** - Diffuser with steel Opposed Blade damper
- Available in square sizes 6x6 thru 16x16
- Soft White

Optional:

- Square to round No Labor Collar (see page 24)
- Finishes B & C (see page 21)
- Tamper proof screws (see page 24)

CORE PATTERN DRAWINGS

For Engineering information see pages E6, E7.

90 Series

Step Down Round Diffuser

- Ideal for residential and light commercial application
- All steel construction
- Attractive concentric ring deflects air stream 360°
- Soft White

Optional:

- Finishes B & C (see page 21)

91 Series Round Bowtie Damper

- Field installable bowtie damper with round ring
- Available 6, 8, 10, 12 & 14"
- Mill finish

92 Series Round Ring

- Use in applications for installing round without damper
- All steel galvaneal construction

For Engineering information see page E8.

203 SERIES

**200 Series
Ceiling Curved Blade Diffuser**

- Stamped curved blades
 - Field adjustable for positive throws and control of face velocities
 - Provides uniform air distribution across ceiling or walls
 - Choice of eight air patterns
 - All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
 - Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
 - Standard - Steel Multi-shutter damper
 - Soft White
- Optional:**
- Steel Lever operated Opposed Blade Damper (200-O)
 - Finishes B, C & D (see page 21)
 - Tamper proof screws (see page 24)

For Engineering information see pages E5.

SCB41 SERIES

**SCB Series
Adjustable Curved Blade Diffuser**

- Individually adjustable steel curved blades
 - Standard with lever operated steel multi-shutter damper
 - Pivoted steel blades for easy firm positioning
 - 4-way air pattern (SCB41)
 - 3-way air pattern (SCB31)
 - All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
 - Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
 - Soft White
- Optional:**
- Steel Lever operated Opposed Blade Damper (SCB41-O or SCB31-O)
 - NO damper (SCB42 or SCB32)
 - Finishes B & C (see page 21)
 - Tamper proof screws (see page 24)

Note: Other air pattern variations & sizes refer to CB Series

For Engineering information see page E22.

400 Series 4-way Ceiling Diffuser Box

- For large volume air delivery
- For evaporative coolers or central blower systems
- Adjustable directional dampers with shut-off
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Soft White

For Engineering information see page E9.

425 Series Step Down Diffuser with Slide-in Damper

- All steel galvaneal construction
- For evaporative coolers or central blower systems
- Modern step-down design
- 4-way air diffusion
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- One-piece removable slide damper for off season closure
- Soft White

SIZE	DIM. "A"
10	1 1/2"
12	2
14	2 3/4"
16	2 3/4"
18	3
20	3
24	3 1/4"

For Engineering information see page E9.

**450 Series
High-Velocity Multi-Louver
Flush Diffuser**

- For evaporative cooling or high velocity exhaust applications with divided 2-way multi-louver and combination shut-off
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Soft White

For Engineering information see page E9.

**452 Series
Two Way Curved Blade Diffuser
with Slide-in Damper**

- All steel Galvaneal construction
- Provides uniform air distribution across ceiling
- For evaporative cooling or high velocity exhaust applications
- One piece removable slide-in damper for off season closure
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Ideal for corridor and hallway application
- Soft White

For Engineering information see page E8.

For Engineering information see page E12.

845 Series Diffuser

- 3-way diffusion for draft-free heat or air conditioning
- For ceiling or sidewall applications
- All component parts, rivets, linkage, and handle, are enclosed in the valve to assure trouble free operation
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Standard - Steel Multi-shutter damper
- Soft White

Optional:

- Steel Lever operated Opposed Blade Damper (845-O)
- Finishes B, C & D (see page 21)
- Tamper proof screws (see page 24)

For Engineering information see page E13 and E14.

850 Series Diffuser

- 1/2" Fan-shaped louvers for heating or cooling
- Use in ceiling or sidewall applications
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Standard - Steel Multi-shutter damper
- Soft White

Optional:

- Steel Lever operated Opposed Blade Damper (850-O)
- Finishes B, C & D (see page 21)
- 1/3" spaced louvers (833)
- 1/3" spaced louvers with Opposed Blade Damper (833-O)
- Tamper proof screws (see page 24)

945 Series Adjustable Diffuser

- Adjustable steel face bars with steel multi-shutter damper
- For ceiling or sidewall applications
- Blades fully adjustable for 3 or 4-way air flow pattern
- Vertical & horizontal air deflectors with nylon bushings for easy adjustment and quiet settings
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Soft White

Optional:

- Finishes B & C (see page 21)
- Steel Lever operated Opposed Blade Damper (945-O)
- Tamper proof screws (see page 24)

For Engineering information see page E13.

951 Series Adjustable Diffuser

- Adjustable steel face bars with steel multi-shutter damper
- For ceiling or sidewall applications
- Vertical air deflectors with nylon bushings for easy adjustment and quiet settings
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Soft White

Optional:

- Finishes B & C (see page 21)
- Steel Lever operated Opposed Blade Damper (951-O)
- Aluminum airfoil blades (950)
- Tamper proof screws (see page 24)

For Engineering information see page E18.

1050 Series Return Air Grille

- 1/2" spacing dual angular louvers
- 22 & 20 gauge cold roll steel
- Install with louvers in up or down position for best duct concealment
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Soft White

Optional:

- Finishes B, C & D (see page 21)
- 1/3" spacing available in limited sizes (**1033**)
- .032 Aluminum construction (**A-1050**)
- Tamper proof screws (see page 24)

For Engineering information see page E16-17.

1075 Series Return Air Grille

- 1/2" spacing dual angular louvers
- 22 & 20 gauge cold roll steel
- Mullions are reinforced with stiffeners for greater strength
- For applications where greater air volume is required
- Install with louvers in up or down position for best duct concealment
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Soft White

Optional:

- Finishes B, C & D (see page 21)
- Tamper proof screws (see page 24)

For Engineering information see page E16-17.

FG Series Filter Grille ^{NEW}

- 1/2" spacing dual angular louvers
- 22 & 20 gauge cold roll steel
- Hand operated lever for easy filter access
- 2" thick standard filter (not included). Capable of holding 1" also.
- Removable face for easy cleaning and maintenance
- Filter door hinges parallel to longest side
- 4-way reversible door on square sizes
- 2-way reversible door on rectangular sizes
- Filter retention tabs
- Concealed mounting holes
- Soft White

Note: Filter grilles are manufactured 3/16" undersized nominal duct outside dimension for ease of installation. Air filter should be 1/4" to 1/2" undersize. Verify with air filter manufacturer for air filter specification.

Shoemaker filter grilles allow for installation of larger thickness filters that can reduce pressure drop on the overall system which can improve air flow through the heat exchanger and allow more time between filter changes.

For Engineering information see page E20.

Optional:

- Finishes B, C & D (see page 21)
- SPFG-4 houses 4" deep air filter

920 FG Series Fixed Bar Blade Filter Grille ^{NEW}

- 45° fixed blades parallel to first dimension given
- Hand operated lever for easy filter access
- 2" thick standard filter (not included). Capable of holding 1" also.
- Removable face for easy cleaning and maintenance
- Filter door hinges parallel to longest side
- 4-way reversible door on square sizes
- 2-way reversible door on rectangular sizes
- Filter retention tabs
- Concealed mounting holes
- Soft White

Note: Filter grilles are manufactured 3/16" undersized nominal duct outside dimension for ease of installation. Air filter should be 1/4" to 1/2" undersize. Verify with air filter manufacturer for air filter specification.

Shoemaker filter grilles allow for installation of larger thickness filters that can reduce pressure drop on the overall system which can improve air flow through the heat exchanger and allow more time between filter changes.

For Engineering information see page E20.

Optional:

- Finishes B & C (see page 21)
- SP920FG-4 houses 4" deep air filter

FG/AD Series Filter Grille Access Door

- Dual Angular louvers for strength and maximum free area
 - Hand operated lever for easy filter access
 - Soft White
- Optional:**
- AD Series - Access Door Only

For Engineering information see FG page E20.

855 Series Baseboard Register

- All steel construction
- Fan shaped 1/2" spaced louvers
- Steel Multi-shutter damper
- 7/8" margin turnback
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Soft White

Optional:

- Finishes B, C & D (see page 21)
- Tamper proof screws (see page 24)

For Engineering information see page E15.

955 Series Baseboard Register

- Extruded aluminum construction with steel multi-shutter damper
- Margin edges are 7/8" projection for baseboard installation
- Nylon bushings for easy adjustment and quiet setting of airfoil blades running parallel to shortest dimension
- Countersunk mounting holes for flush appearance, with color matching Phillips posi-drive screws
- All component parts, rivets, linkage and handle are enclosed in the valve to assure trouble-free operation
- Soft White

Optional:

- Finishes B & C (see page 21)
- Steel Opposed Blade Damper (955-O)
- Tamper proof screws (see page 24)

For Engineering information see page E18.

875 Series Baseboard Diffuser

- All steel construction
- Generous free area for quiet operation
- Lever operated single-blade damper
- Removable face and damper
- Tension wings to stabilize damper
- Available in 15", 18" or 24" lengths
- White

Optional:

- Finishes B & C (see page 21)

For Engineering information see page E21

**1150 Series
Baseboard Return Air Grille**

- 1/2" spaced vision-proof dual angular louvers for strength and maximum free area
- Margin edges are 7/8" projection for baseboard installation
- Soft White with color matching screws

Optional:

- 1/3" spaced dual angular louvers (1133)
- Added mullion stiffeners for greater strength (1175)
- Finishes B, C & D (see page 21)

For Engineering information see page E15.

**1100 Series
Baseboard Return Air Grille**

- All extruded aluminum construction
- 45° fixed blades parallel to longest dimension
- Margin edges are 7/8" projection for baseboard installation
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Soft White

Optional:

- Finishes B, C & F (see page 21)
- Fractional and O.D. sizes
- Flush frame (1100FF)

For Engineering information see page E15.

350 Series Perimeter Floor Diffuser

- Heavy gauge cold-rolled steel
- Louvers designed with rolled rib for maximum strength and rigidity with unique fan-shaped air pattern lending its applications for heating as well as air conditioning
- Opposed blade damper standard on 4" widths.
- Parallel blade damper on 6" widths and larger.
- All component parts, rivets, linkage, and handle, are enclosed in the valve to assure trouble-free operation
- Driftwood Tan

Optional:

- Finishes A, C & D (see page 21)

For Engineering information see page E10.

375 Series Deluxe Floor Diffuser

- All steel construction
- Individual vanes are resistance welded
- All component parts, rivets, linkage, and handle, are enclosed in the valve to assure trouble-free operation
- Locking screw provision concealed beneath the floor for tamper proof settings
- Opposed Blade Damper standard on 4" width diffusers
- Driftwood Tan

Optional:

- Finishes A, C (see page 21)

For Engineering information see page E11.

AFP Series Aluminum Floor Perimeter Diffuser

- All extruded aluminum construction
- Reinforced with pressure lock honeycomb construction to withstand heavy foot traffic
- 1/8" bars spaced on 1/2" centers
- Recessed screwdriver operated opposed blade damper to control air volume for positive balance
- Positive volume set screw
- Blades run parallel to longest dimension
- Satin anodized

Optional:

- 20 degree deflection
- Finishes A, B, C & H (see page 21)
- Gym Grade (**AFP GG**)
- Blades parallel to shortest dimension
- Grille only (**AFG**)

For Engineering information see page E12.

TS Series - Toe Space Grille

- Heavy duty cold roll steel as in the 350 series registers
- Ideal for return air in the toe space areas between kitchen cabinets, stair risers, built-in vanities and similar locations.
- Countersunk mounting holes for flush appearance with color matching Phillips posi-drive screws
- Driftwood Tan

Optional:

- TD Series: with damper, screw holes with color matching panhead screws
- Finishes A, C & D (see page 21)

NOTE: 4" TS design does not resemble photo. 4" design will sit flush with mounting surface.

Linear Series

L 1/3 0°, L 1/3 20°, L 1/2 0°, L 1/2 20°

- All extruded aluminum construction
- LF floor application
- LS sill application
- LSW sidewall application with countersunk screw holes for neat appearance
- Reinforced with pressure lock honeycomb construction to withstand heavy foot traffic
- Available in 1/3" pencil-proof and 1/2" spacing
- Both spacings offer 0° deflection or 20° deflection
- Available in lengths of 144" in one piece
- Satin anodized finish standard
- Core blades run parallel to longest dimension

Optional:

- Recessed hand or screwdriver operated opposed blade damper (LF 1/2 20° O) to control air volume for positive balance of system.
- All extruded aluminum air deflection grid for individually adjustable curved blade deflection (LF 1/2 20° G)
- Mitered corners, Radius and special shapes (refer to commercial catalog)
- LF-GYM - Gym grade (welded blades, frame & extra blade supports)
- Finishes A, B, C & H (see page II)
- Access doors
- Butt joints for continuous look
- Core only, 1/2" or 1/3" spacing (see page 19)
- Frame Widths (example: LFX 1/2 20° O):

Standard	1 11/32"	}	see drawings below
Option X	1 1/4"		
Option Y	1"		
- Surface mounting holes available

For Engineering information see page E24

CORE ONLY - MOUNTING OPTIONS

CORE ONLY - ORDERING & MOUNTING INFORMATION

DIMENSION "A"
 Made in 1" increments @ 1/8" & 5/8"
 over the full inch.
 Example: 4 1/8", 6 5/8", etc.

- Mounting location/Support strength brackets supplied by others,
- Recommended for floor applications: 16 ga. min.
- Use heavier gauge brackets more frequently in high traffic areas.

DIMENSION "B"
 Made in 1" increments @ 1/8", 7/16" &
 13/16" over the full inch.
 Example: 4 1/8", 6 13/16", 8 7/16", etc.

OBD & GRID OPTIONS

1550 Series Floor Register

- All steel honeycomb construction
- Flush core and frame provides smooth surface
- Free area equals more than 75% of nominal size
- Recessed screwdriver operated opposed blade damper to control air volume for positive balance of system
- Positive volume set screw
- Driftwood Tan

Optional:

- Mounting holes for sidewall and ceiling application
- Finishes A & C (see page 21)
- Reinforced (**1550R**) - welded core and extra support for heavy duty application

For Engineering information see page E19.

1600 Series Floor Grille

- All steel honeycomb construction
- Flush core and frame provides smooth surface
- Free area equals more than 75% of nominal size
- Driftwood Tan

Optional:

- Mounting holes for sidewall and ceiling application
- Reinforced (**1600R**) - welded core and extra supports for heavy duty application
- Finishes A, C, D & E (see page 21)

For Engineering information see page E21.

Our Designer Collection illustrates our ability to provide colors, metals and woods in a variety of styles, sizes and finishes. We are able to make special orders to meet your specific needs. We welcome the opportunity to provide unique, decorative and quality registers, grilles and diffuser to blend, accent or enhance your decorative style.

Colors pictured may vary slightly from the actual floor registers. Please check your dealer's display or use our color chip sample for actual register colors.

***PLATED METAL FINISHES AVAILABLE:**
 Polished brass • Antique brass • Polished chrome
 Copper* • Pewter • Satin Nickel • Black Nickel
 Oil Rubbed Bronze • 24 Carat Gold

* All plated items are special order.

** Driftwood Tan and Soft White are standard stock colors

AFP Series: Satin Anodized (standard)

Designer Series Standard Colors & Plating in our 350 Floor Diffuser

- Standard stock color and plated products in our 350 floor diffuser (see page 16 for product description)
- Opposed blade damper is standard on 4" widths.
- Standard perimeter sizes in stock:
 2 1/4" x 10, 12, 14"
 4" x 10, 12, 14"
 6" x 10, 12, 14"

Colors, Plating & Anodizing Special Order Products

- Many of our steel products may be special ordered in Designer Colors or Plated finishes. (Aluminum products cannot be plated)
- AFP Series comes in standard Satin Anodized finish. Also available in Bronze finish or Designer colors
- Please allow 2 weeks for Designer Colors special sizes
- Please allow 4-5 weeks for Plated Series special sizes
- Variations in plating can occur to change gloss and color slightly.

Wood Oak Series

- Standard 350 Series style in Natural finish Red Oak
- Self-rimmed
- Stationary vents (face only)
- Standard perimeter sizes in stock:
 - 2 1/4" x 10, 12, 14"
 - 4" x 10, 12, 14"
 - 6" x 10, 12, 14"

Optional:

- Steel parallel blade damper available, painted driftwood tan
- Non-standard sizes
- Over 250 different wood species available*
- Color match to major flooring brands*. Need color code and brand name
- Available unfinished*
- For Engineering and Complete Performance Data see page E23.

Self-rimmed 350 Series

Unfinished flush mount* floor register

<p>Self-Rimmed Works well with any flooring, wall and ceiling applications. Order by duct size.</p>	<p>Flush Mount Ideal for hardwood flooring. *Flush mount available by special order only. Order by <u>exact</u> O.D. size.</p>

3-WAY DIFFUSER*
(Flush mount shown)

*Available by special order

Wood Oak Series

Available by special order:

- Flush Mount
- Rabbeted Rim
- Self-Rim (non-standard sizes)
- Honeycomb Floor Grille (1600 style #20)
- Sidewall Return Air Grilles (1050 style #21)
- Various wood species
- Please allow 3-4 weeks for wood product special orders

20 - HONEYCOMB FLOOR GRILLE*
(WOOD OAK)

4-way Diffuser*
(Self-rimmed shown)

21 - SIDEWALL RETURN AIR GRILLE*

* Available by special order

Ornamental Series

- Solid Cast Iron
- Standard finishes Soft White or Driftwood Tan.
- Solid edge of grille approximately 3/16" thick

Optional:

- Available by special order in any of our designer colors (see page 1)
- **Solid Cast Brass** has lacquered finish to prevent tarnishing. Smooth finish and uniform surface for a clean look
- Dampers not available

- Available in the following sizes:
2 1/4" x 10, 12, 14"
4" x 10, 12, 14"
6" x 10, 12, 14"

No Labor Collar

- For flex installation
- Square to round transition
- Mill finish

• For pricing refer to index on back page of current "Product Price List".

ITEM	DESCRIPTION
#35	Handle for registers & diffusers
#55	Bow-tie plastic handle
A	8 x 1 1/2" S.M.S. Phillips posi-drive Ovalhead
C	8 x 2" Phillips Panhead Screw (baseboard)
D	8 x 1" Phillips Panhead Screw (Toe space)
E	Tamper proof screw - 1 way S.M.S.
F	Tamper proof screw - T-15Torx H.P.
G	Tamper proof screw - 1/8 hex H.P.
H	1-way tamper proof screw removal tool
I	Torx T-15 H.P. Bit
J	1/8 hex H.P. Bit
#45	Driftwood Tan Spray Paint, 4.5 oz.
#46	Soft White Spray Paint, 4.5 oz.

Designer Collection Accessories:

- #22 Designer Series sample finish chips includes:
10 color, 7 plated & 1 wood chip
- #26 Designer Collection sample set,
Includes 4x10 floor registers in 10 colors, 3
plated & 1 Wood

Residential Products

Registers, Grilles and Diffusers

REGISTER TYPE SELECTION: The register, since it is an inexpensive part of an air conditioning or heating system may get a minimum of consideration. Yet this is the device which brings the conditioned air into the presence of the occupants of the room and their judgement of the whole system may depend on how they consider the supply device works. The return grille has little effect on the conditions within a room as it is a device primarily for covering an opening and the design is important only from an appearance standpoint. The supply register can also be considered a device for covering an opening, in which case it would have thin vanes set to give a minimum resistance to air flow; this gives the maximum effective area for a given register's size. If the vanes of a register are set to fan the air it causes the supply air to mix quickly with the room air and the portion of the room where high air motion exists is considerably cut down. Setting the vanes to fan the air reduces the effective area. Considering only the effective area of a register can give a distorted view of its effect on the whole system an 18% increase in the effective area by changing the register from a fan type to a straighter flow type only increased the flow to the register by 3.3%. That is, the register loss is such a small percentage of the total branch line loss it is not a controlling factor in the flow to that branch.

REGISTER LOCATION: The measure of how well a given register location or design is performing can be determined by how much stratification (temperature difference between floor and ceiling) exists and how uniform the temperature is on any given level in the room.

THROW AND SPREAD: These terms can be misleading for someone who has not witnessed a smoke test on an air supply device. We tend to liken these terms to what happens when water or ink is spilled on a table. The distance it goes out and the amount it spreads to either side can be definitely measured. Air is a gas and cannot normally be seen, but when smoke is added its motion can be observed. Within limits when smoke is blown into a room from a supply, in a matter of seconds the room will be so filled with smoke one cannot find any spot to

get a breath of clean smokeless air. *THROW* is the distance from the supply to where the air speed has dropped sufficiently so that the air motion becomes unobjectionable. Air near the end of the throw moves in pulses, the velocity varying from 25, 50, to 100 FPM. At 100 FPM the air motion is beginning to be objectionable to most people. The throw is the distance to the point where the pulses do not go over 75 FPM. It should not, however, be assumed that if the length of the room happens to be more than the noted throw the air will reach the end of the room. When heating or cooling the problem is getting the air into the room without noticeable air motion and not getting the air dispersed into the room.

Air from a supply grille, register, or any opening maintains the same velocity for a reasonable distance (several inches) from the opening; and measuring the velocity is not too critical as to where the velocity measuring instrument is located. The same situation does not hold for the return grille. A return is basically what the aerodynamicist would call a *SINK*, or a point where air is being sucked in from all directions. Consequently the location of the velocity measuring instrument with respect to the distance away from the grille face can affect the velocity reading more than the actual air flow itself. From a point an inch or so in front of the grille to a point between the vanes the reading can vary over 100%. The effect of moving the instrument a given distance away from the grille face will also vary with the size and shape of the opening. The effective area will then vary with how far the velocity measuring device is located from the grille face. To eliminate this problem the effective area values for the returns in these tables have been selected so that the velocity measuring device was located between the grille vanes. This gives the true velocity reading and will depend only on the suction pressure behind the grille. The effective area values than appear low because of the high velocity reading. The effective area of a return depends primarily on the grille face area and the deflection angle on the vanes. With the vanes at right angle to the face the greatest flow area is obtained, but the grille is less effective in concealing the duct work.

Return Air Sizing Chart

Air brought back to the return air plenum of the furnace must equal the total volume of supply air delivered by the furnace. Careful sizing of return air grilles will assure an adequate air supply to the furnace and prevent air noise at the grille.

Knowing the total CFM delivered by a furnace, you can determine the total free area needed to service the system from the graph below.

Example: The furnace in a small home delivers (and requires) 1000 CFM. Trace the 1000 CFM line in the graph below to the points where it intersects the velocity lines. Now pick off the free areas required to handle 1000 CFM at these velocities from the vertical column on the left.

1000 CFM at 300 fpm requires 480 sq.in.
 1000 CFM at 400 fpm requires 360 sq.in.
 1000 CFM at 500 fpm requires 288 sq.in.
 1000 CFM at 600 fpm requires 240 sq.in.
 1000 CFM at 700 fpm requires 206 sq.in.
 1000 CFM at 800 fpm requires 180 sq.in.

When a practical velocity value has been established select a grille or grilles with free area equal to or exceeding the free area required for that velocity.

ALTERNATE SIZE CHART

**Grille Width
(Inches)**

**Turning
Line**

TO DETERMINE ALTERNATE SIZES:

Place a straight edge across the width and height scales on dimensions as selected. Place a pointer at the crossing point on the turning line, and rotate the straight edge around this point until it crosses the width and height scale at a desired alternate size. Sizes determined from this chart are nominal duct dimensions.

SELECTION OF SIZES:

1. Throw should reach approximately 3/4 of distance from outlet to opposite wall.
2. Velocities of air in the air conditioned space are a major factor in the comfort of the occupants in that space. In general these velocities should not exceed 75 FPM in the occupied level in the room.
3. Due to difference of temperature between the entry air and the room air the entry air stream will drop below the level of introduction in the room. Extreme caution and good judgement are required in the selection and location of the supply of air conditioned air so that the air stream will not enter the occupied zone at the critical velocity and cause discomfort due to excessive drafts. If the entry air stream is overthrown and strikes the wall opposite of the grille location downdrafts will occur which will be objectionable to the occupants.

OUTLET SELECTION BY NOISE CRITERIA.

The following outlet selection takes into account the room absorption, ceiling height, number of outlets, etc., to match the tabulated outlet NC level with the space NC criteria. A direct comparison

**Grille Height
(Inches)**

of the tabulated outlet NC level (assuming a 10 db room absorption and about a 5 ft. direct field from the single source) to the space NC criteria is used most frequently as a simple selection procedure. The actual outlet NC level obtained in a space depends on the sound power level from the outlet, the number of outlets, the distance from the outlet and the attenuation characteristics of the room. A complete treatment of this is found in the ASHRAE Handbook. However an approximate method follows.

RECOMMENDED DELIVERY VELOCITIES FOR VARIOUS APPLICATIONS.

The sound caused by an air outlet in operation varies in direct proportion to the velocity of the air passing through it. The air velocity can be controlled by selecting outlets of proper sizes. The following recommended outlet velocities are within safe sound limits for most applications:

Application	Recommended Face Velocities	NC-Criteria
Broadcasting studios	500 FPM	25
Residences	500 to 750 FPM	25-30
Apartments	500 to 750 FPM	25-30
Churches	500 to 750 FPM	25-30
Hotel bedrooms	500 to 750 FPM	25-30
Legitimate theatres	500 to 1000 FPM	20-35
Private offices, acoustically treated	500 to 1000 FPM	20-35
Motion picture theatres	1000 to 1250 FPM	35-40
Private offices, not treated	1000 to 1250 FPM	35-40
General offices	1250 to 1500 FPM	40-45
Stores, upper floors	1500 FPM	45
Stores, main floors	1500 FPM	45
Industrial buildings	1500 to 2000 FPM	>45

FOOTNOTE A:

SIZE: Nominal size or the duct opening.

EFFECTIVE AREA: The space between the vanes actually utilized by the air.

VELOCITY: The actual velocity of the air through the vanes measured with a velometer or similar device.

DUCT Pt: The total pressure behind the register in the duct forcing that air through the register.

THROW: The throws noted in the tables are the distance from the register to where the air stream velocity has dropped to not under 100/75/50 F.P.M.

FOOTNOTE C:

NOISE CRITERIA: NC "A" scale. (1) Below NC25 extremely quiet. (2) Below NC30 Quiet Office. (3) Below NC35 Conference Rooms; normal voice 10-30 ft. (4) Below NC40 Conference Rooms; 6-12 ft. normal voice. (5) NC45 Conference Rooms; 3-6 ft. normal voice.

FOOTNOTE A:
SIZE: Nominal size or the duct opening.

EFFECTIVE AREA: The space between the vanes actually utilized by the air.

VELOCITY: The actual velocity of the air through the vanes measured with a velometer or similar device.

DUCT Pt: The total pressure behind the register in the duct forcing that air through the register.

THROW: The throws noted in the tables are the distance from the register to where the air stream velocity has dropped to not under 100/75/50 F.P.M.

FOOTNOTE C:
NOISE CRITERIA: NC "A" scale.

- (1) Below NC25 extremely quiet.
- (2) Below NC30 Quiet Office.
- (3) Below NC35 Conference Rooms; normal voice 10-30 ft.
- (4) Below NC40 Conference Rooms; 6-12 ft. normal voice.
- (5) NC45 Conference Rooms; 3-6 ft. normal voice.

FOOTNOTE A: **SIZE:** Nominal size or the duct opening. **EFFECTIVE AREA:** The space between the vanes actually utilized by the air. **VELOCITY:** The actual velocity of the air through the vanes measured with a velometer or similar device. **DUCT Pt:** The total pressure behind the register in the duct forcing that air through the register. **THROW:** The throws noted in the tables are the distance from the register to where the air stream velocity has dropped to not under 100/75/50 F.P.M.

FOOTNOTE B: **SIZE:** Nominal size or the duct opening. **EFFECTIVE AREA:** The space between the vanes actually utilized by the air. **VELOCITY:** The actual velocity of the air through the vanes measured with a velometer or similar device. **DUCT Ps:** The static pressure in the duct behind the grille. The static load on the fan chargeable against that grille. Velometer readings are taken between grille vanes giving actual velocity.

FOOTNOTE C: NOISE CRITERIA: NC "A" scale. (1) Below NC25 extremely quiet. (2) Below NC30 Quiet Office. (3) Below NC35 Conference Rooms; normal voice 10-30 ft. (4) Below NC40 Conference Rooms; 6-12 ft. normal voice. (5) NC45 Conference Rooms; 3-6 ft. normal voice.

FOOTNOTE A: SIZE: Nominal size or the duct opening. **EFFECTIVE AREA:** The space between the vanes actually utilized by the air. **VELOCITY:** The actual velocity of the air through the vanes measured with a velometer or similar device. **DUCT Pt:** The total pressure behind the register in the duct forcing that air through the register. **THROW:** The throws noted in the tables are the distance from the register to where the air stream velocity has dropped to not under 75 F.P.M.

FOOTNOTE B: SIZE: Nominal size or the duct opening. **EFFECTIVE AREA:** The space between the vanes actually utilized by the air. **VELOCITY:** The actual velocity of the air through the vanes measured with a velometer or similar device. **DUCT Ps:** The static pressure in the duct behind the grille. The static load on the fan chargeable against that grille. Velometer readings are taken between grille vanes giving actual velocity.

FOOTNOTE C: NOISE CRITERIA: NC "A" scale. (1) Below NC25 extremely quiet. (2) Below NC30 Quiet Office. (3) Below NC35 Conference Rooms; normal voice 10-30 ft. (4) Below NC40 Conference Rooms; 6-12 ft. normal voice. (5) NC45 conference Rooms; 3-6 ft. normal voice.

FOOTNOTE:

- 1) Tested without filters. Typical disposable 1" capacity is 2 cfm per square inch of gross filter area. Recommended velocity is 300-400fpm. Velocities higher than 500 fpm will decrease filter performance. Increase flow resistance, and possibly blow off agglomerates of collected dirt. Velocity measured 1" from face.
- 2) Generally the more surface area of media you have in an air filter the lower pressure drop you will have across the filter.
- 3) Lower face velocities (the air speed at the face of the filter) will also produce less pressure drop across the filter while higher return air velocity ties cause higher pressure drop and can cause the filter to blow off agglomerates. Ashrae calls out for 300 FPM face velocity across the filter face. This is the ideal return air velocity. Actual face velocities will vary depending on the system design."

Example: 20x25 filter = 3.47 SF x 300 FPM face velocity = 1041 CFM
 20x25 filter = 3.47 SF x 500 FPM face velocity = 1736 CFM

FOOTNOTE B:

SIZE: Nominal size or the duct opening.

EFFECTIVE AREA: The space between the vanes actually utilized by the air.

VELOCITY: The actual velocity of the air through the vanes measured with a velometer or similar device.

DUCT Ps: The static pressure in the duct behind the grille. The static load on the fan chargeable against that grille. Velometer readings are taken between grille vanes giving actual velocity.

FOOTNOTE C: Duct Pt: The total pressure behind the register in the duct forcing that air through the register.

Effective Area: The space between the vanes actually utilized by the air. **Velocity:** the actual velocity of the air through the vanes measured with a velometer or similar device. **Throw:** Is the vertical distance of the air pattern in feet. Throw and spread measurements based on a terminal velocity of 50 F.P.M. **Spread:** The horizontal distance of the air pattern in feet.

ENGINEERING FOOTNOTE FOR SCB SERIES:
SIZE: Nominal size or the duct opening. **EFFECTIVE AREA:** The space between the vanes actually utilized by the air.

VELOCITY: The actual velocity of the air through the vanes measured with a velometer or similar device.

DUCT Pt: The total pressure behind the register in the duct forcing that air through the register. **THROW:** The throws noted in the tables are the distance from the register to where the air stream velocity has dropped to not under 100/75/50 F.P.M.

NOISE CRITERIA: NC "A" scale. (1) Below NC25 extremely quiet. (2) Below NC30 Quiet Office. (3) Below NC35 Conference Rooms; normal voice 10-30 ft. (4) Below NC40 Conference Rooms; 6-12 ft. normal voice. (5) NC45 Conference Rooms; 3-6 ft. normal voice.

FOOTNOTE A:

SIZE: Nominal size or the duct opening.

EFFECTIVE AREA: The space between the vanes actually utilized by the air.

VELOCITY: The actual velocity of the air through the vanes measured with a velometer or similar device.

DUCT Pt: The total pressure behind the register in the duct forcing that air through the register.

THROW: The throws noted in the tables are the distance from the register to where the air stream velocity has dropped to not under 100/75/50 F.P.M.

FOOTNOTE C:

NOISE CRITERIA: NC "A" scale.

- (1) Below NC25 extremely quiet.
- (2) Below NC30 Quiet Office.
- (3) Below NC35 Conference Rooms; normal voice 10-30 ft.
- (4) Below NC40 Conference Rooms; 6-12 ft. normal voice.
- (5) NC45 Conference Rooms; 3-6 ft. normal voice.

CONTINENTAL	TRU-AIR	METAL FAB	US AIRE	SHOEMAKER MODEL NUMBER AND GENERAL PRODUCT DISCRPTION
19	N/A	N/A	N/A	100 •4-way fixed blade step down diffuser
M-1000	500	N/A	N/A	100D •4-way diffuser w/ multi-blade parallel damper
19-18BD	500-O	N/A	N/A	100OBD •4-way diffuser with opposed blade damper
N/A	N/A	MFEASC	N/A	SDD -Square ceiling directional diffuser with flush core
MC	400	MFCSCR	1200M	200 •Curved blade sidewall/ceiling diffuser with damper
200-O	N/A	N/A	N/A	200-O •Curved blade diffuser with opposed blade damper
16	N/A	MFCD	900	90 •Step down curved blade round ceiling diffuser
12B	N/A	MFCDD	N/A	91 •Round butterfly damper
11	N/A	N/A	N/A	92 •Galvanized round ring
M24	104M	MFSCR-4	1104M	150 •4-way stamped 1/2" blade ceiling diffuser
MG-244	N/A	N/A	N/A	151 •4-way stamped grille only
N/A	600	N/A	N/A	400 •Step down 4-way swamp cooler diffuser
M1020	N/A	N/A	N/A	425 •Step down swamp cooler diffuser w/slide-in damper
M1200	700	N/A	N/A	450 •Flush mount 2-way swamp cooler diffuser
N/A	N/A	N/A	N/A	452 •2-way curved blade diffuser with slide-in damper
TG-32/TS285	N/A	MFTSG	1320	TS •2 1/4"-4" toe space grille
L28	N/A	MFFR	1500	350 •2 1/4"-4"-6" floor perimeter diffuser
L-30	N/A	N/A	N/A	350T •Stamped perimeter diffuser for mobile homes
L-305	N/A	N/A	N/A	350TCA •Stamped perimeter return air for mobile homes
P-28	N/A	N/A	N/A	375 •2 1/4"-4"-6" Deluxe floor register
N/A	N/A	N/A	N/A	AFP •Aluminum floor perimeter diffuser
M23	103M	MFSCR -3	1103M	845 •3-way stamped fan shaped louver sidewall register
M22	102M	MFSCR-2	1102M	850 •1/2" spaced 2-way stamped sidewall register
N/A	N/A	N/A	N/A	850-O •Sidewall register with opposed blade damper
M32	N/A	N/A	N/A	833 •1/3" spaced 2-way stamped sidewall register
180 / 240	N/A	MFB	1340	875 •Triangular baseboard diffuser
N/A	N/A	N/A	N/A	945 •Adj blade diffuser with 3 or 4-way air flow patterns
VML	210VM	MFSCRA	VM	951 •Sidewall/ceiling adjustable blade parallel damper diffuser
N/A	210VO	N/A	VD	950 O •Vertical multi-blade diffuser with opposed blade damper
N/A	N/A	N/A	N/A	955 • Baseboard register with multi-shutter damper
M51	N/A	N/A	N/A	1025 •Horizontal multi-shutter sidewall register
G-25	170	MFRG	1400	1050 •1/2" spaced sidewall/ceiling return air grille
N/A	N/A	N/A	N/A	A-1050 •Aluminum 1/2" spaced sidewall/ceiling return air grille
N/A	N/A	N/A	N/A	1075 •Sidewall/ceiling high velocity return air grille
FG-2	190	MFRFG	1410F	FG •Sidewall/ceiling stamped return air filter grille
DFG-2	N/A	N/A	1410AD	FG/AD •Stamped return air filter and access grille
N/A	N/A	N/A	RHEF	920FG • Fixed airfoil blade Ffilter grille
MB22	N/A	N/A	1300	855 •Louvered steel baseboard register w/parallel blade damper
N/A	N/A	N/A	N/A	1100 • Baseboard Return Air Grille
BG21	N/A	N/A	N/A	1150 •1/2" spaced, 7/8" baseboard return air grille
MB32	N/A	N/A	N/A	1133 •1/3" spaced, 7/8" baseboard return air grille
F-20	DR	N/A	N/A	1550 •Honeycomb construction fabricated floor supply register
F25	DSC	N/A	1530	1600 •Honeycomb construction fabricated floor return air grille

Glossary of Terms

REGISTER

A grille in combination with a device for controlling the quantity of air flow.

GRILLE

A device for covering an opening.

DIFFUSER

An air flow device which spreads the air in a circular or partially circular path in a thin stream along a wall, floor or ceiling.

THROW

The distance measured in feet that an air stream travels from the outlet to point of terminal velocity. Throw is measured horizontally from a register and vertically from perimeter diffusers.

SPREAD

The maximum total width in feet of the air pattern at the point of terminal velocity.

NOMINAL

Size given to opening or actual duct dimension in inches

DROP

The vertical distance the lower edge of a horizontally projected air stream drops between the outlet and the end of its throw.

CORE AREA

The area of the finned or louvered portion of the grille.

FREE AREA

The measured area through the vanes which the air sees.

EFFECTIVE AREA

The area determined by the manufacturer which shows the area that is used by the air passing through the diffuser or register. This value will always be less than the free area, because the air never fully utilizes the whole free area.

STATIC PRESSURE

The pressure in air or a gas due to the fact it has been compressed above the outside pressure. In a duct system it is the pressure which builds up before a restriction to give the energy to speed the air up past the obstruction and is measured in inches of water.

C.F.M.

A measure of the volume of air in cubic feet per minute.

NOISE CRITERIA (NC)

A sound rating in pressure level given in decibels. Based on established criteria and specific room acoustic absorption values. Catalogue NC ratings are based on 10db room attenuation, 10-12 watts with a 8db attenuation in all octave bands.

VELOCITY PRESSURE

The pressure developed when air or a gas that is moving has been brought to rest it is measured in inches of water.

TOTAL PRESSURE

The sum of the static and velocity pressures. A tube facing upstream in a duct will indicate the pressure due to the fact the air is moving and also that due to its being compressed in the duct, or it reads the total pressure in inches of water.

LATENT HEAT

Latent heat is the cooling load needed to remove the moisture from the air. The heat removed in taking the moisture from the air does not lower the temperature of the air.

SENSIBLE HEAT

Sensible heat is the heat required to change the temperature of the air. It is the cooling or heating effect that we actually feel or sense, hence the name sensible heat.

VELOCITY

The average velocity of air emerging from the outlet measured in the plane of the opening.

F.P.M.

A measure of the air velocity in feet per minute.

DAMPER OR VALVE

A device used to control the volume of air passing through a duct by varying the cross-sectional area.

JET VELOCITY

The average measured velocity of air passing between the
