Mechanical

## IAQ Specials

The main purpose of an HVAC system in a home or business is to help maintain good indoor air quality (IAQ) through adequate ventilation with filtration and at the same time provide thermal comfort. At Blue Phoenix Mechanical we'd like to offer to only our loyal customers a solution to improve the IAQ in your home or business so that you can be certain your HVAC system is doing what it is designed to do, keep the air that you breath clean and comfortable. To do so, we are offering a special on some of our most popular accessory packages.....

### **Bronze**

#### HVAC Duct Air Purifier

- Installed in HVAC ductwork
- Reduces dust, dander, VOC's, germs, odors and other allergens from indoor air
- Utilizes ionic oxidation, negative ionization, and UV-C light to purify the air
- Improves the performance of existing filtration systems.

### **Silver**

#### Bronze Package + Smart Thermostat

The indoor air is only cleaned during the HVAC system ON cycle. A smart thermostat allows the blower motor to be programmed independently from you heating or cooling cycles which turns your system into a powerfully efficient whole house air purifier. We recommend the Ecobee thermostat.

### **Gold**

#### Bronze + Silver + ECM Blower Motor

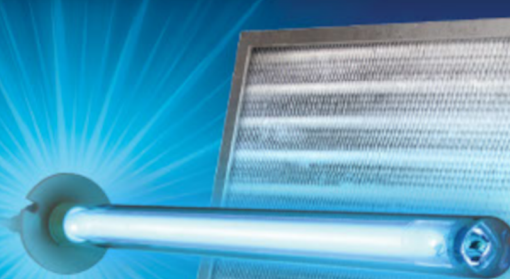

- Upgrade your blower motor to a high efficient motor
- Recommended on systems that are 5 years old or older
- Filter/purify the indoor air for longer periods of time and it won't hurt the wallet.

**\*\*Receive a year supply of MERV 8 filters for free with the purchase of any package\*\***
